This outline provides a strategic framework for **Third Party Proposition Player Services (TPPPS)** companies to mitigate internal and external theft risks. These best practices focus on high-visibility deterrents, data-driven monitoring, and standardized operational controls.

TPPPS Theft Prevention: Operational Best Practices

I. Comprehensive Training & Education

- **Asset Protection Fundamentals:** Intensive training for all new hires on the specific risks associated with chip handling, cash-equivalent exchanges, and table-side behavior.
- **Behavioral Red Flags:** Educating staff on identifying "tells" of collusion or internal theft, such as unusual hand placements or over-familiarity with specific patrons.
- **Regulatory Compliance:** Ensure all staff are trained on state-specific gaming regulations regarding "collection" and "proposition" play to prevent unauthorized procedural "workarounds" that hide theft.
- **Reporting Protocols:** Establishing a clear, anonymous "whistleblower" channel for reporting suspicious activity without fear of retaliation.

II. Table Monitoring & Session Analysis

- **Comparative Collection Metrics:** Regularly weighing the "collection" (fee for play) against the actual volume of hands played to identify discrepancies that may indicate "skimming" or unrecorded play.
- **Player & Dealer Profiling:** Identifying patterns where specific TPPPS players consistently lose to specific house dealers or outside patrons.
- **Outcome & Buy-in Variance (Expanded):** * **Win/Loss Analysis:** Continuous monitoring of player outcomes to identify statistical anomalies that deviate from expected house edges.
    - **Buy-in Tracking:** Correlating the amounts bought in at the start of a session with the ending chip count to ensure every transaction is accounted for. Discrepancies between buy-in levels and final chip tray balances must be flagged for immediate review.

III. Uniform Standards & Physical Controls

- **Standardized Apparel:** Implementing a mandatory uniform policy that prioritizes asset security over fashion.
- **Design Modifications (Expanded):**
    - **Pocket Elimination:** Removing all pockets or permanently sewing pocket access shut to prevent the concealment of chips or currency.
    - **Sleeve Length:** Shortening sleeves so they do not reach the wrist, ensuring that hands and wrists are always visible during chip handling and "clearing" procedures.
    - **Outerwear Restrictions:** Prohibiting overly bulky outerwear (jackets, hoodies, or thick sweaters) that could easily hide gaming assets or equipment.

DRAFT - GPAC PROPOSAL

- **Personal Item Restrictions:**
  - Limiting personal items on the gaming floor to essential equipment only.
  - Mandating the use of clear, transparent bags for any necessary personal items brought into the facility.
  - Prohibiting the use of personal cellular devices or smartwatches at the table.

IV. Performance Reviews & Accountability

- **Regular Financial Audits:** Conducting unannounced tray audits and chip counts mid-shift to ensure real-time accuracy.
- **Performance-Based Evaluations:** Including "Security and Asset Integrity" as a core KPI in employee performance reviews.
- **Corrective Action Plans:** Implementing a strict, graduated disciplinary policy for procedural failures that create theft opportunities.

V. Consistent Surveillance & Auditing

- **Proactive Video Reviews:** Moving beyond "reactive" reviews (after a loss is reported) to "proactive" random audits of session play.
- **Close-Up Coverage:** Ensuring high-definition "PTZ" (Pan-Tilt-Zoom) coverage of the TPPPS chip tray and all hand-to-hand transactions.
- **Integrated Reporting:** Cross-referencing surveillance footage with digital "player tracking" software to verify that the physical actions at the table match the digital transaction logs.

Note: This is not an all-encompassing list and is intended to help guide stakeholders in operations. Successful theft prevention requires a dynamic approach that evolves with new technology and emerging risks in the gaming environment.
